# How to safely remove PPE after tool reprocessing

**1** You should consider the exterior of both pairs of gloves and sleeve contaminated

2 Begin by grabbing the OUTSIDE of your dominant sleeve and pull outwards
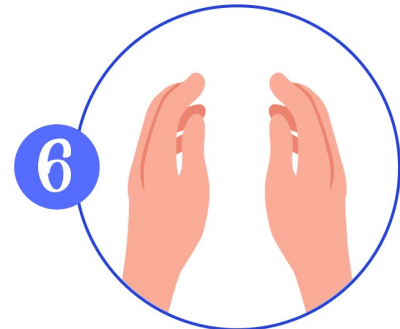

3 Ensure you collect both pairs of gloves in the process and not to touch skin

4 Now insert your dominant hand's index finger INSIDE the other sleeve

5 Remove sleeve and both pairs of gloves, ensuring to only touch the INSIDE of gloves and sleeve

6 Now you should wash your hands before removing mask or other facial PPE
